

CAFFE INFORMATICA

DATA AND SOCIAL CHANGE

#caffeinformatica

003 // The digital age of the expert patient, what's available, and barriers to adoption

Thursday 24 May 2018, 10.00-11.30
Mangobean Darlington

#caffeinformatica event 003

The computing age allows for patients to become experts in their own health and long-term conditions. Patients can view online their health information, including test results, diagnosis and past medical history, and be signposted to validated health information about how to manage their own care. Overcoming the paternalistic model of healthcare and trusting the patient with their information is a major barrier to adoption. How do we change that model to move to a stage where the patient becomes the data controller?

The third Caffe Informatica gathering will hear from Fiona McDonald, who will talk for about 15 minutes followed by 45 minutes facilitated discussion.

Want to come along?

We'd love to see you on 24 May. Please tell us you're coming via the Caffe Informatica thread on the Great North Care Record forum tinyurl.com/caffeinfo003. If you're not already a member of the online forum, it's easy to join, just email Louise Wilson louise.wilson@newcastle.ac.uk.

About Caffe Informatica

Caffe Informatica is all about data and social change, it's a space to connect, learn and share.

Caffe Informatica is a regular event providing space for practitioners and professionals interested in data and social to gather as a community of practice and interest. It's a next step on the Great North Care Record Network journey and builds on the successful monthly Informatics in the Pub events. It's a way to share information and insights; pursue ideas, goals and initiatives; and, exercise collective leadership. It's for people working in local authorities, housing, health, social care, voluntary and community organisations and education; and for data scientists, youth workers and researchers.

Caffe Informatica is being run as a pilot between March and May 2018. The three events are on 27 March, 24 April and 24 May. We'll use these first events to test the idea, find out if it works and, if it does, how we'll run future events.

About the venue and planning your journey

Mangobean Darlington is an accessible cafe next to Darlington Town Hall. It's less than 10 minutes walk from Darlington train station and close to town centre bus stops.

About Fiona McDonald

Fiona is a nurse/health visitor/paediatric ward sister/PCT manager by background, with several years' experience of clinical leadership across primary care before being drawn into clinical informatics in 2009. Fiona was the Electronic Prescription Service clinical lead at NHS Digital for seven years, and has worked on the GP/Patient Online programme as a clinical advisor/Digital clinical Champion at NHS England since 2014.

Fiona is passionate about anything digital to support patients and clinicians to realise time in healthcare settings and increase health literacy to support self-management of long-term conditions.

The Caffe Informatica team

The people behind Caffe Informatica are Louise Wilson and Nick Booth both from Connected Health Cities and Newcastle University, and Stephanie Cole from Sharing Learning Doing.
